

## Utility Bucket

Utility Bucket - "Slip on the forks" accessory buckets or Universal Fit buckets can be used along with any model or design of extendable reach forklift. If your unit is unable to be matched with a quick-tach unit, another brand new or second-hand universal fit bucket can be located in its place. Typical universal lift truck buckets connect to forks that are up to 6" wide and are 48" long. Larger fork pockets can be ordered through an account executive upon request.

Because universal fit lift truck buckets slip onto the forks directly, they stay on the machine and are less at risk to destruction. These buckets are even 50 percent deeper than the quick-tach bucket models. This additional room makes them perfect for carrying irregular shaped loads like for example elevating roof gravel, moving large debris piles, broken up concrete, backfilling behind walls and tearing off roof trash.

### Quick-Tach Buckets

Moreover, made as attachments intended for extendable-reach lift trucks, Quick-Tach buckets, are made to tolerate the positioning of materials far beyond the normal reach of the loader. A hardened beveled cutting blade on both sides and on the leading edge reinforces strength, resistance to wear and tear and provides supreme durability. Quick-Tach forklift buckets are augmented by scuff bars along the base of the unit that shield it from scrapes.

Quick-Tach forklift buckets can be utilized to swap the carriage and forks that weigh between one hundred to seven hundred pounds. Once installed, these buckets free up more of the unit's load capacity, enabling it to deal with heavier and larger things. The Quick-Tach can pour stuff approximately 1.5 feet higher due to the shorter depth of its bucket. These buckets are fabricated in a customized fashion so as to suit all the specifications of specific makes and models of lift trucks. It is important to talk to a construction equipment specialist so as to find the modified Quick-Tach bucket solution for all of your requirements.

Lift truck bucket attachments are great for construction work on the ground level. They can be used to be able to transport snow in the northern regions, gravel and also sand. Clean-up on the jobsite can be even be completed utilizing a forklift bucket. The numerous uses the bucket can complete saves the company a lot of money and time as it does need to completely switch tools or equipment and this can help avoid running into overtime.
