

Carriage Rollers

Carriage Rollers - Carriage rollers are specially designed bearings which are used on lift masts to be able to help them operate in difficult environmental surroundings. Lift masts are frequently subjected to shocks, oscillations, high dynamic and vibrations and static loads. This apparatus is frequently exposed to environmental influences such as cold, heat, dust, contamination, aggressive ambient air and moisture. Thus, the guidance arrangements of lift masts should be specifically robust and have a specific high load carrying capacity.

So as to help compete in many various environmental surroundings, carriage rollers were designed for various lift masts. While having the ability to deal with a specifically high load carrying capacity, these bearings provided an economical operational security for the guidance arrangement of the lift masts.
